

## Aagaard invest in 3 new production machines!

Aagaard A/S at their head office has taken delivery of three new machines over the past 12 months as part of a large investment to increase the efficiency of production worth £400,000.

With Aagaard A/S being a specialist manufacturing company that supplies a range of Filters and components to many sectors including woodworking, manufacturing, recycling and fabrication. This investment is allowing them to provide customers across these sectors with more efficiency and quality.

The three machines that were purchased were; A Fiber laser cutter: Baykal BLE-PRO 1530 - 4 kW, a Press brake machine: Kapema APHS 31160 and a Rolling machine: Davi MCA 3020. Each machine allowing for higher speed, better quality, increased tolerances, better finishes and higher through-put. As well the benefits for the production these machines allow for; better work conditions for employees and less scrap meaning less environmental foot-print.

Morten S. Søbørg, Technical manager (QMS responsible) of Aagaard A/S, said, "We have seen an immediately improvement on through-put and quality as these machines produces the base for the rest of the shop floor. The amount of scrap has also been reduced during the last 6 months. So it is a win for us, our customers and the environment"
